2022-10	0	0	
Total	**17,579**	**1,768**	**10.06%**

Each window includes elapsed days 0–N and requires at least N days of follow-up from signup (funding conversion) or first funding (Interest conversion). Eligible populations therefore differ by window.
Interest conversion excludes customers who activated Interest before funding. Blank cohort rates mean no eligible customers for that window.
Analysis cutoff: 30 October 2022.

Delays and repeat activity

Hypothetical financial-services case | Source: 365 Data Science student data
Analysis cutoff: 30 October 2022

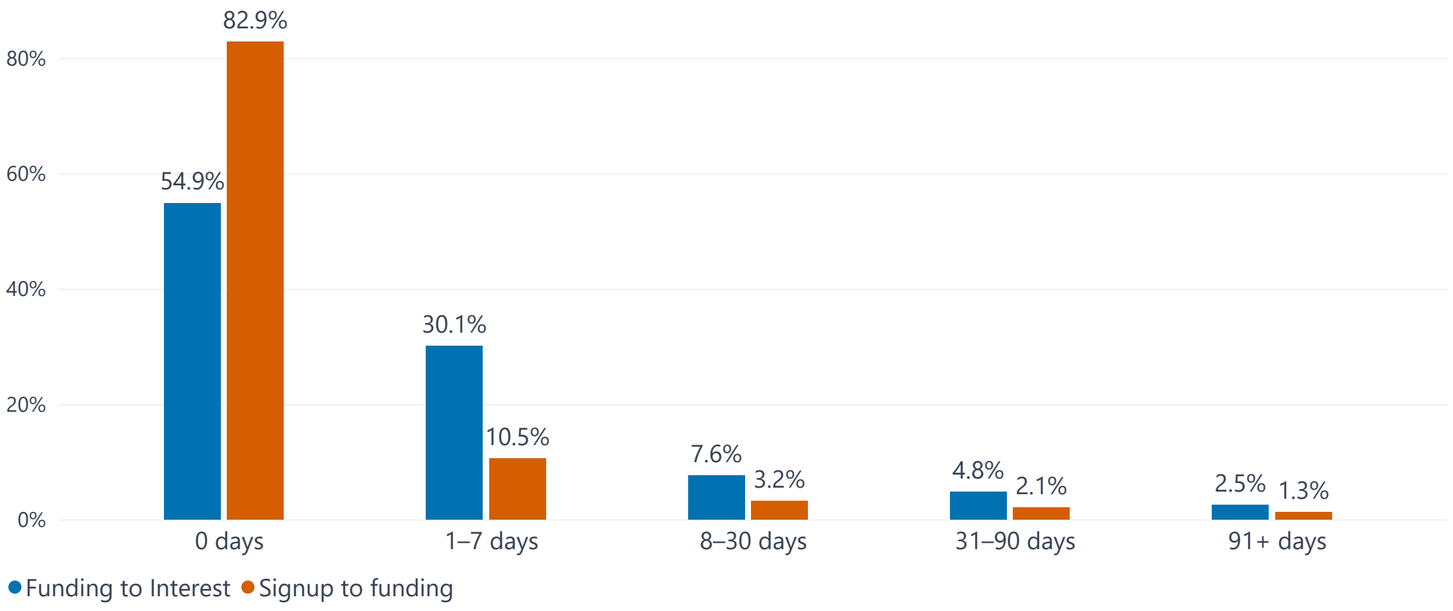

Delay statistics among observed converters

Journey	Converters	Mean days	Median days	P90 days	Max days	Same-day %
Funding to Interest	2,055	8.23	0.00	18	302	54.89%
Signup to funding	20,778	3.90	0.00	3	313	82.88%

Repeat funding within 7 and 30 days

Days	Eligible	Returned	Repeat rate %
7	20,143	5,931	29.44%
30	18,066	6,261	34.66%

Delay distribution among observed converters

Observed converters by delay band

Delay Band	Funding to Interest	Signup to funding
0 days	1,128	17,220
1–7 days	619	2,192
8–30 days	157	664
31–90 days	99	439
91+ days	52	263

Delay statistics include only observed converters through 30 October 2022. Funding-to-Interest delays exclude earlier Interest activations. Zero days means events occurred on the same date. P90 uses the nearest-rank method.
Repeat funding means activity on days 1–N after first funding, with N full days of follow-up. All funded customers are included regardless of Interest path; eligible populations can differ between windows.
